Agency - Buildings & Grounds

Title - SPWD Energy Manager

Email address - aetchemendy@admin.nv.gov

Phone number - (775) 230-1898

Date of Request:

Please allow up to 14 business days for this form to be processed. Proposed work must not begin until this form has been reviewed and approved by both the State Historic Preservation Office and the Nevada Indian Commission. In some cases, coordination with State Lands is also necessary. Per NRS 321.003, a state agency must also submit a Certification Request to the Nevada Division of State Lands before constructing a building or making other permanent improvements to state lands. This includes ground disturbance for site work and utilities. If your project requires a State

Lands Certification, you will find the instructions on the Division of State Lands website under "Forms."

<http://www.lands.nv.gov/>

To expedite your project, the SHPO recommends coordinating with SHPO and State Lands concurrently.

Please submit request form and supplementary materials to the State Historic Preservation Office, 901 S. Stewart St., Ste. 5004, Carson City, NV 89701-5248 or by email to rlpalmer@shpo.nv.gov.

Description of Proposed Work:

Please provide a thorough written description of the proposed work, including—

- Location on building
- Approximate size of area affected
- Existing conditions
- Materials to be used
- Proposed methods (must follow the [Secretary of the Interior's Standards](#))

(Use as many pages as needed)

Buildings and Grounds is performing an upgrade of the HVAC controls of Buildings 12 and 13. and have run into a bit of snag. It appears that Building 13 was never connected to State network so there is no way to communicate with this energy saving system that they are trying to install. A wireless solution has been proposed to connect 13 to 12 via an exterior mounted unit. These antennas would be mounted on the fairly recently constructed walls of the boiler rooms that were added to the buildings sometime in the late 1990's or early 2000's and not to the historically constructed

We understand from other discussion that the building does have fiber going to the outside. It just needs to be connected to building 89. With this information, please discuss this with Jason to see if this project can be combined with the East Side Electrical upgrade project. The discussion occurred and the budget is insufficient to address the addition of fiber. This is not a precedent-setting proposal. No other similar facilities are allowed.

portions of the buildings. They would be mounted across from one another in a “line of sight” fashion that would span the courtyard area which lies between the buildings, and would alleviate the need to disturb the ground area between the buildings or elsewhere in order to connect 13.

We have included a couple of attachments for your review. The photos show the newer wall areas on the buildings that these would be mounted to, and an aerial showing the line of sight pathway between the two buildings. The other attachment is the cutsheet for the proposed antennas that includes the dimensions of them. These units are approximately 5-1/2” in diameter with a depth of about 3-1/2” so they are fairly small, and shouldn’t draw any undue attention.
